

This figure is a complex genomic visualization, likely a genome browser or a specialized analysis tool. It displays a large amount of genomic data across multiple tracks. The top section shows a linear map of chromosomes with various colored bands representing different genomic features. Below this, there are numerous tracks displaying data such as gene annotations, expression levels, and variant frequencies. The bottom section features a large, detailed view of a specific genomic region, likely a gene, with its structure and associated data. The entire visualization is color-coded to distinguish between different types of genomic information.
